VERIFICATION OF EXTRACTIONS
FROM THE SAN BERNARDINO BASIN AREA
BY OWNER (NON-PLAINTIFFS) WHICH HAVE NOT FILED WITH THE
STATE WATER RESOURCES CONTROL BOARD
FOR THE BASE PERIOD 1959 THROUGH 1963

INTRODUCTION

The settlement of the case of the Orange County Water District, Plaintiff, vs. City of Chino, et al, Defendants, being Case No. 117628 in the Superior Court of the State of California in and for the County of Orange, made necessary a settlement of the case of Western Municipal Water District of Riverside County, et al, vs. East San Bernardino County Water District, which was settled by stipulated judgment in Case No. 78426 entered in the Superior Court of the State of California in and for the County of Riverside on April 17, 1969.

In accordance with this judgment, an area lying upstream from the Bunker Hill Dike (San Jacinto Fault) within the San Bernardino Valley was delineated as the San Bernardino Basin Area.

Reference to the judgment in Case No. 78426, entered in the Superior Court of said Riverside County, on Page 10 thereof, Paragraph V, entitled "Extractions from the San Bernardino Basin Area," in Subparagraph (b), entitled "For Use by Others," recites as follows:

"The total actual average annual extractions from the San Bernardino Basin Area by entities other than plaintiffs for use within San Bernardino County for the five-year period ending with 1963 are assumed to be 165,407 acre feet; the correct figure shall be determined by the Watermaster as herein provided."

The Watermaster employed Mr. Horace Hinckley, an engineer, who by reason of his long residence and work within the San Bernardino Basin Area, was able to lend great assistance in the verification of the extractions from the San Bernardino Basin Area.

During the progress of the work of verification, it was discovered that there were approximately 162 wells within the San Bernardino Basin Area for which the owners had either neglected to file annual notices of water extractions with the State Water Resources Control Board or were exempt from such filing as provided for in the Water Code. In addition, there were 478 wells for which the water extractions were reported by annual recordation filings with the State Water Resources Control Board as provided by law.

For this reason and in order to facilitate future determinations required by the judgment the Watermaster representative during the initial verification work separated the verified extractions by other than plaintiffs into the following classifications:

1. Water extractions from the San Bernardino Basin Area for use within the San Bernardino Area which were filed with the State Water Resources Control Board;
2. Water extractions from the San Bernardino Basin Area for use within the San Bernardino Basin Area which were not filed with the State Water Resources Control Board;
3. Water extractions from the San Bernardino Basin Area which were exported from the San Bernardino Basin Area;
4. Water extractions from the Santa Ana River Watershed Area above the Bunker Hill Dike outside of but for use within the San Bernardino Basin Area.

For brevity, categories 3 and 4 were reported by the Watermaster representative as Export and Import respectively.

Paragraph V of the judgment entitled "Extractions from the San Bernardino Basin Area" directs the Watermaster to determine the correct figure for the total average annual extractions from the San Bernardino Basin Area by entities other than Plaintiffs for use within San Bernardino County during the five-year period ending with 1963, which for judgment purposes had been assumed at 165,407 acre-feet. This verification requires only an arithmetical determination as to the total water extracted from each well or surface source within the area. Therefore, in the final summary of the verified extractions such amounts were classified only as to those who filed with State Water Resources Control Board and those who did not. The titles of the individual worksheets of the Watermaster representatives included in this Volume have been changed accordingly.

This volume includes only the verified extractions from wells within the San Bernardino Basin Area made by non-plaintiff owners who have not filed with the State Water Resources Control Board for the five-year period 1959 through 1963.

During the progress of the verification, it was discovered that the extractions from many of the wells were less than 25 acre feet annually.

The summary of verified extractions on Table No. 1 shows both the total extractions for the five-year Base Period ending with 1963 for the entire 162 wells and, in addition, the five-year average of extractions which are 25 acre feet or larger for the five-year Base Period ending with 1963.

Reference to Table No. 1 will show that during the Base Period ending with 1963 the average annual extraction from the total 162 wells was 13,887 acre feet, while the summary for the five-year average extractions excluding less than 25 acre feet is 13,406 acre feet from 62 wells. Thus, the comparison is as shown in the following tabulation:

<u>Number of Wells</u>	<u>Five-Year Average During Base Period</u>
162	13,887 Acre Feet
62	<u>13,406</u> Acre Feet
100	481 Acre Feet

The elimination of those wells from which less than 25 acre feet was extracted eliminates 100 wells from future verification, with a difference of only 481 acre feet. For this reason, the total verified extractions for the five-year Base Period ending with 1963 for non-plaintiffs who have not filed with the State Water Resources Control Board will be used as 13,406 acre feet.

An index by State Well Numbers is included on pages iv and v.

495 kWh/ac-ft.

(*) Total 67 thru 69

256

COMMENT: H. Hinckley estimated annual usage 1959 thru 1961 as follows:
50 acres vineyard @ 1 ac-ft./ac. = 50 ac-ft.
19 acres alfalfa and irrigated pasture @ 5 ac-ft./ac. = 95 ac-ft.
Total 145 ac-ft.

Aerospace started in 1962 and H. Hinckley's estimated annual usage for 1962 and 1963 was 80 ac-ft which check with Whittaker's annual average for 1967 thru 1969.

COMMENT: H. Hinckley estimated average annual base period usage for 10 acres of citrus plus one residence as 30 ac-ft. In 1967 or 1968 5 acres of citrus were removed so Hinckley's estimate of 30 ac-ft annually for 10 acres checked very well with Whittaker's computation (1967 thru 1969) of 15 ac-ft annually for 5 acres.

COMMENT:		Information from Ed Meyer to H. Hinckley was that well supplied water for 10 acres of Sudan grass and 10 acres of alfalfa, using sprinklers, from 1959 thru 1962. Turley Pump Co. stated that well was designed for 400 GPM at 240-foot lift. H. Hinckley's estimated annual usage at 4 ac-ft/ac for 20 acres or 80 ac-ft.

<p>COMMENT: Spring is located above the Small Canyon Dam of the County Flood Control District. During the base period the spring supplied water to 3 houses and barn at the Thompson-Randall-Barnes Ranch, with usage estimated by H. Hinckley as 3 ac-ft annually. In the flood of 1969 the pipe line washed out and no water was supplied to the now abandoned house in 1969 or 1970.</p>
