VERIFICATION OF EXTRACTIONS
FROM THE COLTON BASIN AREA
FOR THE BASE PERIOD 1959 THROUGH 1963

INTRODUCTION

The settlement of the case of the Orange County Water District, Plaintiff, vs. City of Chino, et al, Defendants, being Case No. 117628 in the Superior Court of the State of California in and for the County of Orange, made necessary a settlement of the case of Western Municipal Water District of Riverside County, et al, vs. East San Bernardino County Water District, which was settled by Stipulated Judgment in Case No. 78426, entered in the Superior Court of the State of California in and for the County of Riverside, on April 17, 1969.

In accordance with this judgment, an area lying between Bunker Hill Dike (San Jacinto Fault) and the Colton Fault was termed the Colton Basin Area, and the area lying between the Colton Fault and the Riverside County Line was termed the Riverside Basin Area situated in San Bernardino County, also commonly called Riverside Basin North. These two areas are shown on Appendix "A" of the judgment and also upon a small scale map, which appears on Page 110 of this volume.

Paragraph VIII of the judgment, entitled "Extractions from Colton Basin Area and Riverside Basin Area in San Bernardino County," in subparagraph (a), recites as follows:

"The average annual extractions from the Colton Basin Area and that portion of the Riverside Basin Area within San Bernardino County, for use outside San Bernardino Valley, for the five year period ending with 1963 are assumed to be 3,349 acre feet and 20,191 acre feet, respectively; the correct figures shall be determined by the Watermaster as herein provided."

In compliance with the directions contained in the Judgment, it was necessary for the Watermaster to verify all of the extractions from the Colton Basin Area and further verify those portions of the extractions which were used outside San Bernardino Valley.

In making the verification, the Watermaster first obtained from the official records of the State Water Resources Control Board the extractions from individual wells and points of surface diversions from the Colton Basin Area. The average annual extractions for the five-year period ending with the calendar year 1963 were tabulated by individual wells and surface diversions, with totals for each extracting entity. The pumping equipment and/or diversion facilities and methods of measurement at each individual well and/or point of surface diversion were inspected by the Watermaster representatives.

The offices of the major extractors were visited and the methods of reduction and tabulation of individual measurements from which the water quantities were taken for the annual filings with the State Water Resources Control Board were inspected and reviewed. In the case of the smaller extractors, when doubt existed as to the accuracy of the extractions, the owners were contacted and the matter reviewed and discussed.

During the verification, it was found that there were a total of 44 individual extractions upon which filings had been made and 2 non-filers. Both of the non-filers were extractors of very small quantities of water.

The results of the Watermaster's verification are shown on individual sheets for each extraction, numbered Page 1 through Page 46-A. These sheets have been summarized in Table No. 1 and Table No. 2.

Table No. 1, consisting of eight pages, summarizes the water production by owner in the Colton Basin Area for the period 1947 through 1970. The table was compiled by the use of the annual filings of extractions made with the State Water Resources Control Board and includes the recordation number of each filing and the State well number of the well from which the extractions were made. During the five-year Base Period 1959 through 1963, where the verification differed from the filed extractions, the filed extractions are enclosed in parenthesis and the verified extraction is typed directly above. The verified extractions made by owners who had not filed with the State Water Resources Control Board have been added to the total filed and verified extractions as shown on Pages 7 and 8. Throughout the years, well ownerships have changed hands and where this has occurred, the name of the new owner is shown in parenthesis adjacent to the name of the former owner.

Table No. 2, consisting of five pages, shows the water production by well and owner for the five-year Base Period ending in 1963 and the five-year Base Period average. The names of new owners are shown in parenthesis adjacent to the former owners as in Table No. 1. The extractions by owners who have not filed with the State Water Resources Control Board have been omitted from Table No. 2, since the verification by the Watermaster of all of the non-filers led to the elimination of the extractions because of the minor quantities of water involved.

Included in this volume is an index by State recordation number and also by State well number.

The total verified extractions for the Colton Basin Area for the five-year Base Period ending in 1963 is as shown in the following tabulation.

| <u>Year</u> | <u>Acre Feet</u> |
|--------------------------|------------------|
| 1959 | 13,114 |
| 1960 | 11,131 |
| 1961 | 14,131 |

- (1) This table represents a tabulation of the production by well and owner total taken from Table No.1 of this volume for the five-year base period and annual average ending in 1963.
- (2) Those figures appearing in parenthesis have been replaced by order of the Watermaster to the figures appearing above those which appear in the parenthesis as a result of the verification program ordered by the Court.
- (3) The owner totals have been corrected for the verification by the use of the figures above those which appear in parenthesis.

COMMENT: From best information available this pump hasn't been operated since 1960 and no power connected in 1960. Equipment was removed prior to 12-6-67.

In 1957 production was estimated by irrigation duty: 8-24hr. days per month for 10 months which equals 127 ac-ft annually.

COMMENT: This is not a well for extraction. It is a dry well for discharge of return water from the air conditioning system.

Never had any pumping equipment
