VERIFICATION OF EXTRACTIONS  
FROM THE RIVERSIDE BASIN  
WITHIN SAN BERNARDINO CO.  
FOR BASE PERIOD 1959  
THROUGH 1963

INTRODUCTION

The settlement of the case of the Orange County Water District, Plaintiff, vs. City of Chino, et al, Defendants, being Case No. 117628 in the Superior Court of the State of California in and for the County of Orange, made necessary a settlement of the case of Western Municipal Water District of Riverside County, et al, vs. East San Bernardino County Water District, which was settled by Stipulated Judgment in Case No. 78426, entered in the Superior Court of the State of California in and for the County of Riverside, on April 17, 1969.

In accordance with this judgment, an area lying between Bunker Hill Dike (San Jacinto Fault) and the Colton Fault was termed the Colton Basin Area, and the area lying between the Colton Fault and the Riverside County Line was termed the Riverside Basin area situated within San Bernardino County, also commonly called Riverside Basin North. These two areas are shown on Appendix "A" of the judgment and also upon a small scale map, which appears on Page 110 of this volume.

Paragraph VIII of the Judgment entitled "Extractions from Colton Basin Area and Riverside Basin Area in San Bernardino County", in subparagraph (a), recites as follows:

"The average annual extractions from the Colton Basin Area and that portion of the Riverside Basin Area within San Bernardino County, for use outside San Bernardino Valley, for the five-year period ending with 1963 are assumed to be 3,349 acre feet and 20,191 acre feet, respectively; the correct figures shall be determined by the Watermaster as herein provided."

In compliance with the directions contained in the Judgment, it was necessary for the Watermaster to verify all of the extractions from the Riverside Basin Area within San Bernardino County and further verify those portions of the extractions which were used outside San Bernardino Valley.

In making the verification, the Watermaster first obtained from the official records of the State Water Resources Control Board the extractions from individual wells and points of surface diversions from Riverside Basin North. The average annual extractions for the five-year period ending with the calendar year 1963 were tabulated by individual wells and surface diversions, with totals for each extracting entity. The pumping equipment and/or diversion facilities and methods

of measurement at each individual well and/or point of surface diversion were inspected by the Watermaster representatives.

The offices of the major extractors were visited and the methods of reduction and tabulation of individual measurements from which the water quantities were taken for the annual filings with the State Water Resources Control Board were inspected and reviewed. In the case of the smaller extractors, when doubt existed as to the accuracy of the extractions, the owners were contacted and the matter reviewed and discussed.

During the verification, it was found that there was a total of 103 individual extractions upon which filings had been made and 6 non-filers.

The results of the Watermaster's verification are shown on individual sheets for each extraction, numbered Page 1 through Page 109. These sheets have been summarized in Table No. 1 and Table No. 2.

Table No. 1, consisting of eighteen pages, summarizes the water production by owner in the Riverside Basin North for the period 1947 through 1970. The table was compiled by the use of the annual filings of extractions made with the State Water Resources Control Board and includes the recordation number of each filing and the State well number of the well from which the extractions were made. During the five-year Base Period 1959 through 1963, where the verification differed from the filed extractions, the filed extractions are enclosed in parenthesis and the verified extraction is typed directly above. The verified extractions made by owners who had not filed with the State Water Resources Control Board have been added to the total filed and verified extractions as shown on Pages 15, 16, 17 and 18. Throughout the years, well ownerships have changed hands and where this has occurred, the name of the new owner is shown in parenthesis adjacent to the name of the former owner.

Table No. 2, consisting of fourteen pages, shows the water production by well and owner for the five-year Base Period ending in 1963 and the five-year Base Period average. The names of new owners are shown in parenthesis adjacent to the former owners as in Table No. 1. The extractions by owners who have not filed with the State Water Resources Control Board have been included on Pages 13 and 14 in Table No. 2.

Included in this volume is an index by State recordation number and also by State well number.

The total verified extractions for the Riverside Basin Area within San Bernardino County for the five-year Base Period ending in 1963 is as shown in the

following tabulation.

<u>Year</u>	<u>Acre Feet</u>
1959	38,572
1960	33,837
1961	37,176
1962	30,539
1963	<u>28,521</u>
Total	168,645
Five-Year Average	33,729

 Extractions  
 by Atlas  
 Material Corp

Whittaker Calc. from Power  
 X  
 No. for this  
 for well and  
 other power requirements

(1) Atlas Material Corp are filing in error under Recordation No. 3600628 which is Holiday Rock Co. well near the same location. These extractions from Recordation No. 3600628 COMMENT: Extraction estimated from plant production + travel pit. Since well is hooked to common power meter + the KWH for well cannot be determined. Also since we have no way of estimating the demand for the plant operation it is recommended that extractions filed on this well by Atlas Material Corp be accepted as shown.

**COMMENT:** Well owned and operated by W. H. Kirkpatrick through 1967. Kirkpatrick estimated extraction by rate 2.0 M.H. x hours operated. appeared flowmeter used to divide approx 8 acres of pasture and fruit trees + domestic use for 1 residence. appears a little high but not an unreasonable. OK as filed, may have been 16 Acres in 1960 & 1961.

1961 pump test

(1) Power Records & Pump test.

Watermaster Representatives

COMMENT: 1963 Land use maps indicate approx 25 Acres of irrigated pasture - using duty of 5.0 ft per acre the demand would be 25 x 5 = 125 Acre feet. This is close to Extractions listed. However calculations with power records are inconsistent with duty method. Probably because 1961 pump test 51m<sup>3</sup> very low efficiency. Used duty method

Watermaster representative

(1) Power and pump test for 1968  
 other years duty 7.30" or 2.50 Acre Ft/Acre. X Acres  
**COMMENT:** This well is used for truck crops on  
 50 Acres. Hamada is using a duty of  
 40 inches per acre per crop which is 3.33 Acre Ft/Acre

1968 power record and pump test indicates  
 441 Acre ft for 185 Acres = 2.4 ft per acre.

Power records indicates that duty per crop is closer  
 to 2.5 ft per acre. Use average of 30" per acre.

Watermaster's calculations

(1) Power Records and Estimated total head

COMMENT: The water levels in this well have fluctuated from 26' to 133' during the study period. Mr. Whittaker's calculations are based on 1956 pump test with 232 KW/H/AC FT which is determined from 83' water level and 9.6 feet discharge head.

Water master used static water levels of 26' to 133' with discharge head of 29.6 ft from 1962 pump test.
